

From description to a working scientific system

Conceptual framework • Paper II focus: RECONSTRUCT

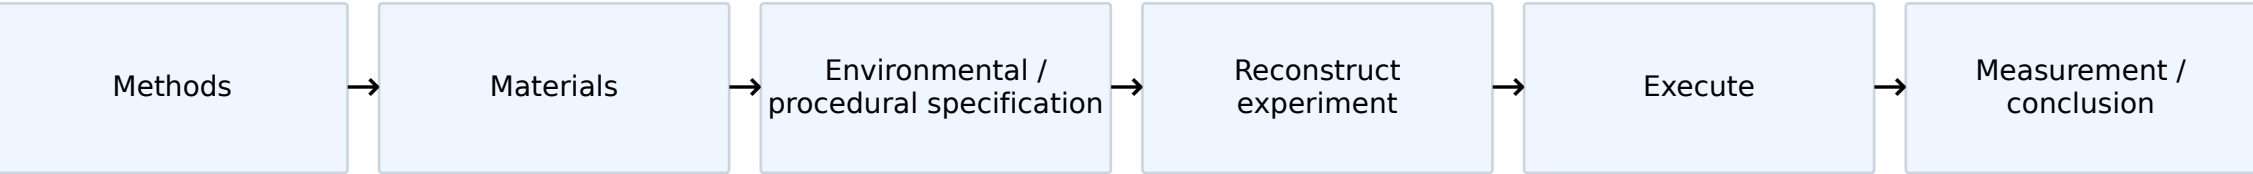

- └ resource accessible?
 - └ exact input state identifiable?
 - └ historical input state retrievable?

WET

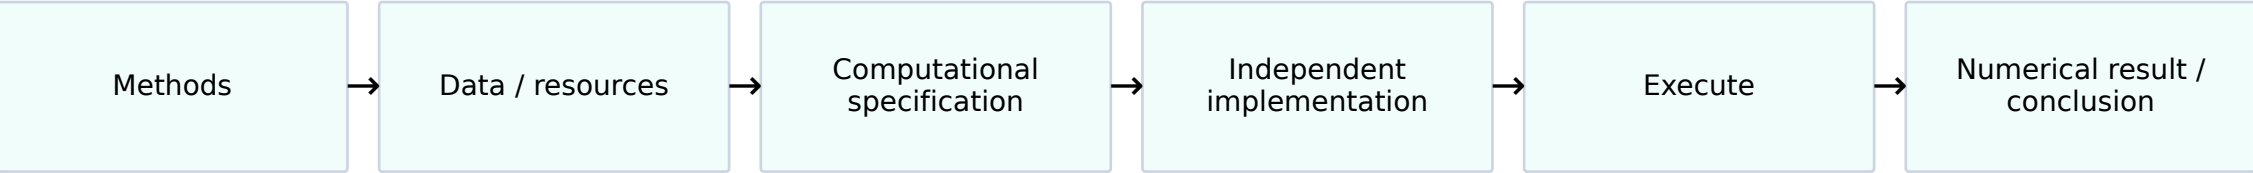

Paper II focus; EXECUTE and REPRODUCE observed

ROBUST: future Paper III (excluded)

Public resources can drift over time; availability ≠ identity of the input state.

DRY

Independent implementation ≠ access to the original code

Wet/Dry pathways are a conceptual analogy only. No robustness or multiverse analysis.
